

MELMAK - FASTER FRACTURE HEALING

- ✓ can accelerate the healing of fresh fractures by 38%.
- ✓ have a heal rate of 86% for delayed and non-union fractures.
- ✓ can reduce cast time by as much as 22%.
- ✓ are an effective treatment for stress fractures.

All of this in just one 20min/day treatment.

Helping bones heal faster with the Melmak Low Intensity Pulsed Ultrasound (LIPUS) Device. LIPUS devices have been clinically proven to support and accelerate the healing process of acute as well as delayed and non-union fractures.

Be proactive. If you know you have the following common predictors of slow/non-healing fractures, consider Melmak early for fresh fractures.

- Smoking
- Medical conditions, such as diabetes, hormone-related problems or vascular disease
- Some medications, such as corticosteroids and other immunosuppressants
- Fractures that are severe, complicated or become infected
- Advanced age (over 60)
- Poor nutrition or impaired metabolism
- Low levels of calcium and vitamin D
